
Inserting hyperlinks using \'format\'

Posted by jongreen - 2011/08/05 14:02

Hi

ARIData Tables has been working well in rendering sortable tables in Joomla articles. However, I now want to use the first row as a hyperlink to drill down to more information. so in the format column for the 'id' row I am using

Hello,

Could you provide link to page where we can see the problem and temporary access to your Joomla! backend by email?

Regards,
ARI Soft

Hi

I can't unfortunately as it is an internal site currently. Is there other info/screenshots I can send you?
Thanks for prompt response

I want to be able to create a 'detail' table in a second article on the same page as a 'primary' table located in another article. The code discussed above seems to make the ID in the 'primary' table a hyperlink to the 'detail' table in another module. I'd like to do that but the code is a bit perplexing.

I looked at this bit of code:

Hello,

Provided code is incorrect. A correct code can look like:

=====
