
Loading Data From CSV

Posted by sstockst - 2011/08/09 16:55

Do you have any examples that show the correct module settings for a CSV data table. I have read your instructions but all I see is "loading data".

thanks

Hello,

Where we can see the problem? It can be a conflict with a 3rd party extension.

Regards,
ARI Soft

I am looking for examples of how to complete the options on the module. Do you have any documentation for this?

I sent an email to you with a screen shot, but I added the CSV link in the text box as the directions state. It doesn't load my data. Question: If it picks up my CSV (which is 12,000 rows, should I see the fields below the text box populate with data?

Re:Loading Data From CSV

Posted by admin - 2011/08/21 10:43

If CSV file is located in Joomla! root folder, set "CSV -> Path to CSV file" parameter to BUDS Verify.csv value. "CSV -> Filters -> Value" parameter should contain one value, not several values.

Re:Loading Data From CSV

Posted by admin - 2011/08/21 16:30

If you mean attached file from your previous post, "CSV -> Path to CSV file" parameter is set to /public_html/BUDS Verify.csv , set it to BUDS Verify.csv (we wrote about it in our previous post) and clean "Filter" parameter or set it to correct value.

Re:Loading Data From CSV

Posted by frogbonz - 2011/08/21 16:40

Ok. I have put the CSV file in my web-site root (not the Joomla root). I cleared all filters. The module still shows "No Data Available."

What "correct value" should I enter?

Re:Loading Data From CSV

Posted by frogbonz - 2011/08/21 16:42

Quick note: The System Plugin would not install. Is this required for the module to function correctly or is it purely an addition?

Re:Loading Data From CSV

Posted by admin - 2011/08/21 16:44

Read this post please, we wrote about Joomla! root directory, not about web-site root directory. We can help to configure the extension if you provide link to page where you try to use it and temporary access to your Joomla! backend by email. If it is not possible we can provide refund so it is hard to find the reason of the problem because we don't see structure of your site template and other details.

Regards,
ARI Soft

Re>Loading Data From CSV

Posted by admin - 2011/08/21 16:45

"System - ARI Extensions" is required only for Joomla! 1.6 and this fact is described in readme.txt file from extension's package.

Regards,
ARI Soft
