A-Z Linkable Menu

Posted by mjstewart - 2011/08/19 17:26

I was wondering if it was possible to generate or create an A-Z Menu based on a column pulled from a CSV file with ARI Data Tables. Can such a thing be done?

The purpose for this is to implement a phone/directory based listing and to have it be searchable when the user first clicks on the directory link without having any listings come up until they type a name in. And in addition, I need to have an A-Z menu so that if they wish to, they can click on the letter of the person's last name that they are trying to find.

Thanks in advance for your help.

Hello,

Sorry, but the extension doesn't support described ability.

Regards, ARI Soft
