
Pre-sales questions

Posted by inspectahdeck - 2011/08/22 09:20

Hi there,

I am looking to buy your product but need to know if it can do the following:

I am creating a website for traders. I would like members to be able to login and access a table where I create the fields but each user will be able to enter their own details for their own reference.

For example the table columns will be something like:

- Date (date field), Trade (text field), Taken (drop down), Profit/Loss (tex field), Notes (text box).

Each trader would be able to record their own trades here, and will not be accessible to any other member. I would like the user to be able to add rows, and to delete rows etc.

As well as the above functionality, there are a few things I would also like to know:

Would it be possible for the system to do some calculations? e.g. cumulative profit?

Would it then be able to use the data to create a chart?

Thanks

=====

Hello,

The extension can show data, but it doesn't support ability to add, update or delete records.

Regards,
ARI Soft
