
SQL Table: get ONLY 2 columns

Posted by mole - 2011/08/28 20:43

I can only readout 2 columns. When I insert a 3rd one I get a blank screen

Here is just a simple Example which does not work:

```
{aristable}
{aristablecolumns}/{aristablecolumns}
{aristablequery}
SELECT
  id AS ID,
  name AS name,
  username AS user
FROM #__users
{/aristablequery}
{/aristable}
```

When deleting the 3rd select (username) it works.

I have no idea! Hope You have!

Regards
mole

Hello,

Check web server error log please or provide temporary access to your J! backend by email so we could investigate the issue.

Try now please. We have installed "PHP Settings" plugin to set "pcre.backtrack_limit" PHP option to "-1". The reason of the problem is described here.

Thanks! It works now.

Best support as always!!

Best Regards
