
Move \"Showing # of # Records\" to Filter Position

Posted by gorden - 2011/09/08 20:32

My client does not believe that the number of records displayed is intuitive enough, he thinks that a visitor will see 10 records, not find what he wants and then go away.

He wants me to move the "Showing # of # Records" statement in the footer to the "Filter" Position in the header (we won't be using the filter function at all.

I have gone through the modules folder and can't see what files i would need to edit.

Please advise.

Hello,

Is "Using jQuery UI themes" parameter set to "Yes"?
