## No data available after update to 1.7.1

Posted by Bartalbert - 2011/10/05 19:47

---

First of all, I love ari dattables. Works great and is easy!

But... after the update to 1.7.1 the tables are not showing anymore. I use .CSV files.

The tables are inside articles using {moduleid=}. Which always have worked fine. I read that normally you have to use: {aridatatables moduleid"xx"}{aridatatables}. I tried that, but didn 't work either after the update.

Please help me out, I use a lot of tables on my website: <http://www.leidenamateurvoetbal.nl/statistieken/speler-van-de-week-spelersklassement-amateurvoetbal-leiden>

Hello,

Could you provide temporary access to your J! backend by email so we could investigate the issue?

are you using {aridatatables moduleid="xx"} rather than {aridatatables moduleId="xx"}?

the Id vs id fixed it for me

Thanks Trevor for your reply.

ItÒ's not the solution for me. I just used the capital Id (exactly as mentioned on this website), this didnÒ't change the appearance.

Enter relative path to CSV files. In other words use the next path "data/mycsvfile.csv" instead of "http://www.domain.com/data/mycsvfile.csv". We have changed it for "Spelersklassement eerste en tweede klasse" module.
