
Extract data based on user ID

Posted by diender - 2011/10/08 07:52

Hi,

I want to show data to the logged user.

These tabels i have:

tabel_content:

tabel_content.created_by (here is stored the Joomla user ID)

tabel_content.id (here is stored the listing number)

tabel_listings

tabel_listings.listing_id (here is stored the listing number)

tabel_listings.item1

tabel_listings.item2

tabel_listings.item3

When i use:

```
SELECT
```

```
tabel_listings.item1
```

```
tabel_listings.item2
```

```
tabel_listings.item3
```

```
FROM
```

```
tabel_listings
```

...it shows ALL available data. I want only show the data which belongs to the logged user. Somehow it has to:

1: match the Joomla user ID with tabel_content.created_by

2: find the corresponding tabel_content.id

3: use this tabel_content.id to find the tabel_listings.listing_id

4: show the items for the found tabel_listings.listing_id

Can this be done?

=====

Hello,

Use the next SQL query:

```
SELECT
```

```
  L.item1
```

```
  L.item2
```

```
  L.item3
```

```
FROM
```

```
  tabel_listings L INNER JOIN tabel_content C
```

```
    ON L.listing_id = C.id
```

```
WHERE
```

```
  C.id = {$UserId}
```

Regards,

ARI Soft
