
Get Data from CSV

Posted by acevk - 2011/10/08 10:58

Hi!!!

I installed aridatatable module and plugins. i enabled the plugins and i made the following steps

I put the demo csv file of yours that i found in forum with the name "questions_import2.csv"

I configured the module having CSV Source type and i put the path /images/siteuse/questions_import2.csv

I created an article with the code {aridatatables moduleid="41"} where 41 is the module id of the ari module.

and finally i created a menu that is connected with this article

Unfortunately i didn't make it to work...

Can you please advice me?

Thank you in advance

Hello,

Use images/stories/questions_import2.csv value instead of /images/stories/questions_import2.csv for "Path to CSV file" parameter. If it doesn't help, provide a link to a page where we can see the problem and temporary access to your J! backend by email so we could investigate the issue.

Regards,
ARI Soft

Thank you... Now i can load my data.

But i have a small issue.... No matter witch jQuery UI Theme i use my letters are white inside the table also i created a custom css from Theme roller As you suggest but the table has the same behavior...

Is there anything else that i have to choose in order not to take the site template font color but the jQuery UI Theme font color?

Thank you in advance!!!

It can be a conflict with site template styles. Send page files of a page with the module by email so we could investigate the issue. This process is described here.
