
CSS Classes

Posted by pkjoshi - 2011/10/19 15:40

I am trying to change the font style of a column in the table. How can I do that. I have tried to put bold, strong, h1 etc. in css classes field, but it didn't help.

How can I use the css classes field given in column settings.

Regards.

Hello,

For example you can set "Columns settings -> CSS class" parameter to sample_class value for necessary column(s) and then enter the next CSS rule in "CSS Styles" parameter:

```
TABLE TR TD.sample_class
{
font-weight: bold;
color: red;
}
```

Thank you so much, it's quite well.

Can I also use hover effect(mouseover) color change using css for rows.

Thank you.

Add the next code to "CSS Styles" parameter:

```
{ $id } TR: hover TD
{
color: red;
background-color: blue;
}
```
