Column settings
Posted by cnewell - 2011/11/18 18:21

_____

I am having problems manipulating column width and allowing links

I am using an ARI Data Table and its source is a csv file.

Directions read,

"Columns settings:

Use 'Columns settings' parameter for this purpose. At first specify column ID or index (column index is zero-based) in 'ID' column that indicate what column you want to configure. After this the following parameters can be defined: "

When I enter information into the column setting it doesn't change anything in the table.

_____

Hello,

Could you provide a screenshot with configuration "Columns settings" parameters section and a link to a page where we can see table?

Regards,
ARI Soft

Re:Column settings

_____

Can't give you a live link, because the site is under construction and closed.

As you can see the setting I enter for column width and Regognize links don't take effect in the website after I save it in Joomla and review it on the frontend

Re:Column settings

_____

We suppose "Choose table type -> ARI Data Table -> Auto width" parameter is set to "Yes".

Regards,
ARI Soft

Re:Column settings

_____

No actually I've tried setting that parameter to know it changes nothing in the column width or the recognize link

==

Re:Column settings

_____

Provide a link to a page where we can see the table.

Regards,
ARI Soft

Re:Column settings

_____

I am having the same problem. i don't know how to change the column widths. Where do I find the ID of the column? Is the width measured in pixels? How do I do this?

_____

Try to add use the next code in "CSS Styles" parameter in module settings:

```
{$id} .ari-tbl-col-INDEX
{
 width: 100px;
}
```

Where INDEX is zero-based column index, for example if you want to set width to 100px for the first column and 75px for the second column, add the next code:

```
{$id} .ari-tbl-col-0
{
 width: 100px;
}

{$id} .ari-tbl-col-1
{
 width: 75px;
}
```
