## SESSION like a query parameter

Posted by Paolo De Falco - 2011/11/20 12:34

---

Hi,

i have a problem. I need to retrieve data by a query in a module AriDataTable based on a session variable that i retrieve in the same article.

In the article:

```
{jumi }
```

```
{aridatatables moduleId="118"}
```

The query in the moduleId 118 is.

```
SELECT dbo_coordinatori.Nominativo, Ricevimento FROM (dbo_coordinatori INNER JOIN scrutini_classi ON
dbo_coordinatori.IdInsegnante = scrutini_classi.CodCoordinatore) WHERE scrutini_classi.idClasse = ?????????;
```

How can i do to give \$\_SESSION like a parameter of the query of the module?

I've tried to modify the

\modules\mod\_aridatatables\includes\kernel\DataTables\Models\class.DataTablesDataSqlModel.php file adding these rows:

```
if (strpos($query, '{$_SESSION:}') !== false)
```

```
{
    $session = $_SESSION;
    $db =& JFactory::getDBO();
```

```
    AriArrayHelper::walkRecursive($session, array(&$db, 'Quote'));
    $params = $session;
```

```
}
```

and then i've modified the select instruction in this way

```
SELECT dbo_coordinatori.Nominativo, Ricevimento FROM (dbo_coordinatori INNER JOIN scrutini_classi ON
dbo_coordinatori.IdInsegnante = scrutini_classi.CodCoordinatore) WHERE scrutini_classi.idClasse = {$_SESSION};
```

or this way

```
SELECT dbo_coordinatori.Nominativo, Ricevimento FROM (dbo_coordinatori INNER JOIN scrutini_classi ON
dbo_coordinatori.IdInsegnante = scrutini_classi.CodCoordinatore) WHERE scrutini_classi.idClasse =
{$_SESSION:codclasse};
```

...but i don't retrieve any data.

Someone can help me?

Paolo

---

Hello,

Try to use the next SQL query:

```
SELECT dbo_coordinatori.Nominativo, Ricevimento FROM (dbo_coordinatori INNER JOIN scrutini_classi ON
dbo_coordinatori.IdInsegnante = scrutini_classi.CodCoordinatore) WHERE scrutini_classi.idClasse =
{$_SESSION:codclasse}
```

If it doesn't help, could you provide temporary access to your J! backend by email so we can investigate the problem?

Regards,

=====
