
How To Use ARi Data Table

Posted by faustofurtado - 2011/12/20 13:26

I'm from Brazil,
Sorry my English.

When I bought this product, I imagined that is a component, but it's a module.

I installed the product but I don't know how to use that. Do you have some documentation to help me.

I created a form with CKforms, I would like to show the table in my page.

Some questions:

1Ñ" How to connect with joomla database?

2Ñ" How I can create a ARI Data table?

3Ñ" How I can show the table in front end.

4Ñ" How I can show graphics

Thanks

Hello,

Documentation how to use the extension can be found in "Description" field on module settings page. Click by "Detailed help here" link and a lightbox with documentation appears. Regarding your questions:

1. If you want to show data from Joomla! database, set "Choose source type" parameter to "SQL" and "SQL -> Choose DB type" parameter to "- Joomla! database -".

2.A table widget can be selected in "Choose table type" parameter. If you want to use "ARI Data Table" widget, set the parameter to "ARI Data Table".

3. Assign "ARI Data Tables" to necessary module position and associate it with pages where do you want to show it as any other Joomla! module. If you want to load "ARI Data Tables" module into an article. You can use "Content - ARI Data Tables" plugin which is included into extension's package.

4. Set "Choose table type" parameter to "ARI Data Visualizer" or to "ARI GChart".

Regards,
ARI Soft

Thanks for atention.

But when I choose joomla databases, the system show me :

- Joomla! database -
NÐ³o hÐ± parÐ²metros para este mÑf dulo
In English, "Don't have parameters for this module."

But I have joomla database, I need to configure something?

My version of joomla is 1.5.23.

Thanks

If "- Joomla! database -" option is selected, it is not necessary to configure any other DB parameters like connection string, user name and etc. so "There are no Parameters for this Module" message appears under "- Joomla! database -" parameters section. The next step is enter SQL query for retrieving data from a database, for example the next SQL query can be entered in "SQL -> SQL query" parameter to show articles title and ID:

```
SELECT
id,
title,
FROM
#__content
```

Hi there,

How do I create the graphs just like on the demo page - "2009 Employee Sales by Department" graphs?
Where do I pull the data or create it from?

Hello,

The extension can show data from CSV files and databases. Sample CSV file (visualizer.csv) is located in /modules/mod_aridatatables/samples folder.

Regards,
ARI Soft
