_____

Hi !
To see a number of rows of my query, i can use Limit in sql query, but i want to use in ari data table module, two datas :
Dˆone and Dˆtwo.
I load the two datas with php script but i can't use it in the sql module of ari data table, like

select * from data base
limit $one,$two

can you help me !

Thanks

==

Hello,

The module supports ability to use request variables in SQL query. It doesn't provide ability to use PHP variables. If you want to extend this functionality, see "prepareQuery" method in
\modules\mod_aridatatables\includes\kernel\DataTables\Models\class.DataTablesDataSqlModel.php file.

Regards,
ARI Soft
