## Column Width

Posted by AIWC - 2012/02/06 04:36

---

Hello,

I purchased your program and have some problems with the column width. The table is shown nicely, but if I try to change the width of the columns, it is only working for the table itself, but not for the header. I checked the forum and tried everything suggested, but nothing worked.

I added some pictures from the table and also from the module parameters. Please advice...

Hello,

Is it possible to provide a temporary access to a page where we can see described problem by email so we can investigate an issue?

Regards,  
ARI Soft
