## I Am Stucked

Posted by insiyatif - 2012/02/08 14:34

---

Hi,

I want to use this perfect module to let students learn their quiz result.  
I have a database columns like this:

```
dbID >> Auto increment records
tckimlik >> Students id
isim >> name
```

```
//
turkceD >> quiz Correct Answers
turkceY >> quiz wrong answers
turkceN >> quiz net ( 4 wrong answers reduces 1 correct answers: eg: 10 Correct 4 wrong = 9 net answer)
```

```
// we have same rule for the tests below...
```

```
matematikD
matematikY
matematikN
fenD
fenY
fenN
sosyalD
sosyalY
sosyalN
ingilizceD
ingilizceY
ingilizceN
```

```
//
puan >> Score
```

```
// order of merits
genelSira >> general order of merit
ilSirasi
ilceSirasi
```

How should i configure your module to show results for the data above?

Thanks

=====

Hello,

Could you send SQL dump of tables with sample data by email?

Regards,  
ARI Soft

By the way,

I created seperate database along with joomla database. They bot stored on same location.

I choose "External Database" Database type "MysqLi" and host "localhost"

is this correct?
