
CSS issue for table header

Posted by erickla36 - 2012/02/09 22:09

I have having a template conflict (I have a Rockettheme template installed). I had the very same table code on my old template (joomla 1.5) and had no issues. Now for some reason, the header of the table has a light background color - the css I entered for ARI soft points to a background-image which is gray. This only appears for tables in articles. If I put this in a module, it displays correctly. However, when trying the loadposition module, it still displays the incorrect header. So I am assuming this is an issue with the template for the body theme or something.

Here is the link to the page:

<http://www.http://kanjamleague.com/newsite/index.php/2011results>

The first two are incorrect (top one is the code right in the article and the second one down is the loadposition module in the article). The table at the bottom of the page in the module is correct. However, I need to insert these tables directly into articles. The table code and table css is correct. I have no clue where in the template css I need to modify. Please help!

Hello,

Open appropriate CSS template in "CSS Templates" section on component backend and replace ".table_header" selector with "TABLE.display .table_header" selector and ".table_header_w" with "TABLE.display .table_header_w" selector.

Regards,
ARI Soft
