
Filter multiple category issue (AND vs OR)

Posted by jbenander - 2012/02/11 18:25

Hi,

I am trying to create a module that will have a table filter two categories, but it seems the filter is using an "OR" function, rather than an "AND".

For example, I need to a filter to show me all "Summer" programs in "Italy".

So I have two filters set up for the module: 1) Term = "Summer"; 2) Location = "Italy"

But instead of showing me all Summer programs in Italy, the results show ALL summer programs in all locations, as well as ALL Italy programs in all terms.

Is there a way to have the filter show "Term=Summer" AND "Location=Italy", rather than "Term=Summer" OR "Location=Italy"?

Thanks,
John

Hello,

If you mean "ARI Data Table" widget, it doesn't support described ability.

Regards,
ARI Soft
