
Date Format

Posted by sitemoves - 2012/02/16 14:10

Hi,

I'm using ARI data tabels with the SRI table sorter.

I'm using the dutch time format and in one of the threads I read, ARI table sorter can only sort mm.dd.yy but I really want dd.mm.yy

Is this possible?

And if yes, how to do and how to configure the module-settings?

Regards, Theo

Hello,

Could you provide a link to a page where we can see a table?

Hi, at the moment the table is not visible for visitors but when you go to <http://www.kweekel.nl/weblog.html>, you will see a loginform on the left side.

You can login with ari/soft.

Then a hidden menu will appear.

Click on TEST THEO and you see the tabel.

Date on your site is not in dd.mm.YY format. Month is not a number, it is a string. The extension can't sort values in this date format.

That's right but I did this because otherwise the dates were in random order.

In excel I used this format and did the sorting in excel so the dates were in a logical order

"ARI Table Sorter" widget can sort dates in dd.mm.YYYY format when month is a number. It doesn't support sorting when month is a string.

So what formatting do I have to use in excel?
And what should I type in a date-field of excel to get for instance 14-03-2012?

Sorry, but how Excel is related to "ARI Data Tables"? "ARI Data Tables" can show data from a CSV files, this is a simple text format and it doesn't support any data types. MS Excel application can show CSV files, but it is not Excel document format.
