
Show Results After Searching

Posted by insiyatif - 2012/02/18 18:08

Hi,

Before buying this great extensions I asked wheter I can show result only by demanding it.

I mean. I have search box this is fine. But I need to show results by searching them. You told me it is possible to have this function. How can i do that?

And do you have tutorial where you explained all the functions of your module?

Regards

Do you want to show a search box before showing results?

Regard,
ARI Soft

Yes. I need only search box. Here is the scenario:

I want to learn my test results. I have an id: 12345678911 (id length is 11 and standart)
I enter my id to search box. Than I see my results.

Regards.

You can create two articles and add the next HTML code to the first article:

ID:

Where ARTICLE_ID is ID of the second article.

In the second article load "ARI Data Tables" module which help "Content - ARI Data Tables" plugin, the code will look like:

```
{aridatatables moduleId="MOD_ID"}/aridatatables}
```

Where MOD_ID is ID of "ARI Data Tables" module.

Use the next SQL query in "ARI Data Tables" module settings:

```
SELECT
*
FROM
`sonuclar`
WHERE
tckimlik = {$REQUEST:adt_tckimlik}
```

Hi,

I followed your instructions step by step. But here is the problem.

ID:

when save this...

index.php?option=com_content&view=article&id=ARTICLE_ID

disappears.

I use code mirror editor.

ARTICLE_ID should be replaced with ID of the second article.

About the problem, could you provide a temporary access to your J! backend by email so we can investigate it?

Regards,
ARI Soft

Everything is perfect now. But i have one minor issue.

Why i can't get my sidebar modules? And url is not SEF?

thanks.
