
Column Width

Posted by insiyatif - 2012/02/18 20:57

Hi,

I need to fix column width but no matter what value i enter column width section i couldn't see what i need.

The size of columns are'not changing...

Is there a tutorial?

Regards

Hello,

You can use "Columns Settings" parameter section. Enter name of a column in "Columns Settings -> ID" parameter and the next code in "Columns Settings -> Format" parameter:

{ \$value }

Talk about non intuitive!

Was very frustrated with columns not following # of characters I entered. Better documentaion is definitely required. It could be intuitive for a CSS freak, not the average user.

Also it refuses to recognize the number of rows to display, always shows 10.

Explain in more details what do you mean under "Also it refuses to recognize the number of rows to display, always shows 10."? Could you provide a link to a page where we can see this problem and screenshot(s) of module settings page by email?

Regards,
ARI Soft
