# Conflict with rt_camber Template

Posted by hosker4u - 2012/02/20 14:27
_____

The rest of the pagethe page will not load?

If I view source I can see the data their, but its not loading. I can switch to the default template and it works fine.

Anything from Ari Data Tables end that is conflicting with the template?

Hello,

It seems this is a problem with 3rd party extension or site template feature which is used to optimize javascript files loading. We can investigate this issue in more details if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft

_____

Try now please. It was a problem with RokGZipper plugin.

Regards,
ARI Soft

ahh, working fine now thanks.

Will worry about GZIP once website gets to a level when its worth it. Much appreciated !

_____

Hello,

RokGZipper plugin can't load external javascript files properly. It is possible to load jQuery library from local storage then it is possible to use RokGZipper for "ARI Data Tables" module.

Regards,
ARI Soft
