
Table

Posted by Pavel Svarc - 2012/02/20 15:01

Hello,

Thank you, it's a bug reporting. Now even connect a table and I won.

Re:Table

Posted by Pavel Svarc - 2012/02/20 18:41

From the afternoon working on it to the editor appeared in the settings for inserting tables. I went through step by step. But yet to me it could not. I have Joomla version 5.2 Where can I make the mistake?

:(:(:S

Is there a manual?

If you want to insert "ARI Data Tables" module into an article, you can use "Content - ARI Data Tables" plugin. Code will look like:

```
{aridatatables moduleId="MOD_ID"}/{/aridatatables}
```

Where MOD_ID is ID of "ARI Data Tables" module. The module should be enabled. If you use a WYSIWYG editor, switch it to plain text mode before inserting plugin code because WYSIWYG editors can add extra HTML code in design mode.

Regards,
ARI Soft

All attempts fail as described. I'm doing something wrong. Can you send it visually? Thank you.

Could you explain what exactly doesn't work? Do you see plugin code, see nothing or something another? Could you provide a link to a page where you try to insert a table?

Regards,
ARI Soft

:S :P :(

The annex set the ARI Tables. Please inform us where my mistake. The table is displayed. Thank you very much.

Somehow they fail :) http://www.ari-soft.com/images/fbfiles/files/ARI_tablesSetup-38c100507c4844e829279eeba580ae6a.zip

According to provided screenshot, you use incorrect plugin code. Correct code looks like:

```
{aridatatables moduleId="87"}{/aridatatables}
```

Super table is there ..
But how do the tables X? be 8?

I NEED TO GIVE MORE ARTICLES more CSV files. as this directs the appropriate csv file?

In addition, I need to be selected by date in the title.

eg: A20120221.csv, B20120221.csv, C20120221.csv

Next day: A20120222.csv, B20120222.csv, C20120222.csv

Thank you.

Each "ARI Data Tables" module instance can show only one CSV file. Joomla! provides ability to create as many module instances as you wish. You can read about it [here](#). You can create a new module instance for each CSV file which you want to show or it is possible to use "Modules Anywhere" plugin to use one module instance and change only path to CSV file.
