
Display Format Question

Posted by doug4r - 2012/03/01 01:05

I am considering buying ARI Data Tables and have a question.

Let's say we have the 3 data base fields:

Field1
Field2
Field3

The normal display of a record is in a single row with columns, like:

Field1 Field2 Field3

Can I also display a record in a single column with rows, like:

Field1
Field2
Field3

Doug

Hello,

The extension can swap rows with columns.

Regards,
ARI Soft
