
Can not get data to show

Posted by Tom16 - 2012/03/01 09:30

Hi,

I am using ARI Data Tables with Joomla 2.5 to show data via the folowing query:

```
SELECT
j17_comprofiler.cb_mv,
j17_comprofiler.cb_voortitel,
j17_comprofiler.cb_voorletters,
j17_comprofiler.firstname,
j17_comprofiler.middlename,
j17_comprofiler.lastname,
j17_comprofiler.cb_achtertittel,
j17_comprofiler.cb_bedrijf,
j17_comprofiler.cb_functie,
j17_comprofiler.cb_bedrijftelefoon,
j17_comprofiler.cb_bezoekadresplaats,
j17_users.email
FROM j17_comprofiler
INNER JOIN j17_users ON j17_comprofiler.id = j17_users.id
WHERE j17_comprofiler.cb_advocaat2 =1 AND j17_comprofiler.approved =1 AND j17_users.block =0
```

(I connect to the Joomla database.)

I keep getting: No data available.

Any ideas please?

Tom

Hello,

Use the next SQL query and set "SQL -> Debug mode" parameter to "Yes":

```
SELECT
P.cb_mv,
P.cb_voortitel,
P.cb_voorletters,
P.firstname,
P.middlename,
P.lastname,
P.cb_achtertittel,
P.cb_bedrijf,
P.cb_functie,
P.cb_bedrijftelefoon,
P.cb_bezoekadresplaats,
U.email
FROM
#__comprofiler P INNER JOIN #__users U
ON P.id = U.id
WHERE
P.cb_advocaat2 =1
AND
P.approved =1
AND
```

U.block =0

Thanks for your prompt response.

The solution does not work. Now it seems to be in a loop with loading data.

If you want to have a look:

<http://vrouwholle.com/index.php/nl/ari-advocaat-dienstbetrekking>

http://vrouwholle.com/administrator/index.php?option=com_advancedmodules&view=modules

(It not a production site yet.)

I checked the query and left " P.cb_bedrijftelefoon," out because that field is now deleted.

Try now please. The problem occurred because the module was loaded into an article (by "Modules Anywhere" plugin) and into a module position.

Regards,
ARI Soft

Thanks, that did it!!!

And so fast...

Tom
