
Aligning tables in an article

Posted by misterg2 - 2012/03/05 09:16

I am trying to display a table within an article showing prices of a particular product that includes a shipping cost.

URL is <http://joomla.bradfordfhs.org.uk/index.php/publications-gen/products/87-bfhs-articles/products/142-romancatholic>

I have loaded the data into a joomla table and created an ARI Data Table to insert the data.

I am unable to centre the table on the page. Is this possible ?

In addition I would like to add shipping costs to a unit price for a product but I cannot find out how to do a calculation in elements of the table - is this possible.

The CD you can see is £7 - with several postage rates depending on where it is shipped.

Thanks - great product by the way.

Hello,

Sorry, but it is impossible to open provided link. It requires credentials.

Regards,
ARI Soft

Sorry - try www.joomla.bradfordfhs.org.uk/ and then navigate to publications-products and select one of the product links. You should not need credentials. Thanks in advance...

Use the next CSS rule:

```
TABLE.center
{
margin: 0 auto;
}
```
