
Link to Article

Posted by Olaf Esch - 2012/03/06 08:13

Hello,

we have this Query to show the posts of the current LoggedIn User and it works fine:

```
SELECT
created AS "Erstellt am:", title AS "Beitragstitel"
FROM
#__content
WHERE
created_by = {$UserId}
ORDER BY created DESC
```

but is ist possible to make the title linkable so that i can get to the article by clicking on it ?

We tried to set "{\$value}" to Column Settings -> Format but the Link doesn't work. Index.php and the Category is missing, i think whith this it would work, but we don't get it going.

Do you have any solution to solve this ?

Hello,

It is possible to use the next SQL query:

```
SELECT
id,
created AS "Erstellt am:",
title AS "Beitragstitel"
FROM
#__content
WHERE
created_by = {$UserId}
ORDER BY
created DESC
```

Set "Columns Settings -> ID" parameter to id value and set "Columns Settings -> Hidden" parameter to "Yes" then set "Columns Settings -> ID" parameter to Beitragstitel and "Columns Settings -> Format" parameter to the following value:

{ \$value }

Regards,
ARI Soft

This works great.

Thanks a lot !!!
