Fetching a maximum of rows in cache

Posted by casimir - 2012/03/11 04:46

_____

Hi,

When I have thousand of rows I feel that ARI Data Table fetch all rows before making the table display.

I would like ARI Data Table does not perform the request of all rows before making the display of the first page.

I would prefer that ARI Data Table fetch, example : 50 rows, and every time I go to the next page it loads the rows ahead.

Do you have this option available ?

Note : I doesn't speak about display rows but about fetching rows.

Thank,

Benoit L.

_____

Hello,

Currently the extension doesn't support server side paging so it is not possible to load only specific number of rows.

Regards,
ARI Soft
