How set a fixed height on my display table ?

Posted by casimir - 2012/03/11 21:16

_____

Hi,

I would like set a fixed height on my display table.

Following the displayed page the end of table is not always at the same position.

My problem is I can't press next page icon from the same position.

I must use the scrolling bar of Internet Explorer to reach the next page, time to time, or go up and down with the mousse.

The reason of this situation is because in the columns the data length is not always the same. I can see the table size in height is alway modified by Ari Data Table following the page displayed.

I would like not used scroll height bar.

Thank you,

Benoit L.

_____

Hello,

Could you provide a link to a page where we can see a table?

Regards,
ARI Soft

_____

Try to add the next code to "CSS Styles" parameter in module settings:

```
{$id} TBODY TR TD
{
 height: 80px;
}
```

Regards,
ARI Soft
