
Query with {\$UserId} don't work

Posted by mole - 2012/03/12 15:33

Hi,

I'm stucked by trying to filter data from the logged user. The following code (as a simple example) is beeing used and does not work. But when changing {\$UserId} to i.e. 42 it is ok! What is wrong??? :unsure:

```
{aristable}  
{aristablequery}  
SELECT *  
FROM #__users  
WHERE id = {$UserId}  
{/aristablequery}  
{/aristable}
```

I'm running Joomla 2.5.2

Thanks for helping!

mo

Hello,

It is possible to use {\$UserId} variable in "ARI Data Tables" extension, not in "ARI Smart Content" (provided code is for "ARI Smart Content").

But I have bought ARI Smart Content: DataTable Pack v. 1.8.1. (have a look in my profile user = mole) Is it not the same as ARI Data Tables. If so where is the major difference?

These are two different extensions. "ARI Data Tables" is a Joomla! module. See it in action [here](#).
