
Jumi and ARI Data Tables

Posted by msm_portata - 2012/03/21 03:59

Hello,

I have an article set up as such:

```
{jumi }  
{aridatatables moduleId="139"}
```

The script called by jumi loads data into a table which then displayed by aridatatables. The problem is that the jumi and aridatatables plugins are called at the same time so there is a race condition which aridatatables always wins.

Is there a way to force aridatatables to wait until jumi is done?

The easiest way would be to set the order of execution in the aridatatables plugin, however aridatatables is a content plug-in whereas jumi is a system plugin so they cannot be ordered against each other, as far as I know.

=====

Hello,

Is it possible to provide a temporary access to your J! backend by email and a link to a page where you use the module?

Regards,
ARI Soft
