
Need to load module in a custom component

Posted by vikasag - 2012/03/22 09:26

Hi,

I have successfully installed Ari Data tables and got it working with my queries. However, since I want this to be displayed on a view page within a custom component I have written.

Using the Content-Ari Data tables, I'm not able to see the results and neither using the following code:

```
jimport('joomla.application.module.helper');
$modules = JModuleHelper::getModules('user101');
echo " ";
print_r ($modules);
echo " ";
foreach($modules as $module)
{
echo JModuleHelper::renderModule($module);
}
```

Could you please provide me a quick help so that I may get the reporting module of my application up and running?

Many thanks,
Vikas

Hi,

I have sent you the order number on the e-mail address you mentioned. Kindly check and let me know.

Thanks,
Vikas

I tried Modules Anywhere and Module Plant both, and tried embedding the code e.g. {module 'Ari Data Table'}, {modulepos 'user101'} etc. into the view templates of my custom component.

These two plugins seem to be working only with the Joomla articles/content - I tried it there and it was working. However, they just did not work with the custom component.

If you could please send me example (maybe, a code snippet to include into the PHP code or something) of how the Ari Data Table module could be inserted into a component, it'll be really great.

Any help that points me to the right direction would be welcome indeed! I shall appreciate your kind help as I'm absolutely stuck getting my reports to work.

Many thanks,
Vikas

These two plugins give you a code such as , which can be inserted into Joomla content. The Joomla content is stored into the database and rendered appropriately when it is retrieved to display the content.

However, in case of my component, I've written the PHP code and would like to show this in the view page redirected from a controller. Unfortunately, the code generated by either of the plugins does not work if I paste it directly into the HTML part of the view or the PHP code.

Thanks,
Vikas

Could you provide a link to a page where you try to load "ARI Data Tables", module a temporary access to your backend by email?

Hello Admin,

I have sent you an e-mail listing all the details required for logging in. Kindly check and let me know if you need anything further.

I'll appreciate your kind response.

Thanks,
Vikas
