## Search Table on Page Load from GET Variable

Posted by adam.singer - 2012/03/29 16:32

---

We need a way to add a variable to the URL and have this table grab the GET variable, paste it into the text box and trigger the table to automatically search the table for that value. Please let me know which files I should modify, thanks.

Hello,

It is possible to use request variables in a SQL query. For example if you want to use "var1" request variable in a SQL query, use the next predefined variable in SQL query:

{\$\_REQUEST:var1}

Can we use a GET Request variable when using the CSV file instead of doing SQL?

Request variables can be used in "Value" parameter from "CSV -> Filters" section.
