
damned English((((I downloaded not what i need

Posted by alex_valery - 2012/04/27 19:21

hello
bought you
ARI Smart Content: DataTable Pack
But instead I needed
ARI Data Tables
found in
ARI JDataTable
I do not understand is the thing the same? I have bought, or not what I need? (((

And if this thing the same:
how to make from this table
<http://ums-mos.ru/addres/1.htm>
Explain that to insert, do not understand (((

Hello,

Explain in more detailes what do you want to achieve? Do you want to show data from a database, a CSV file or convert a plain HTML table to "ARI Data Table" widget?

Regards,
ARI Soft

Thanks for the answer
I want my site to put a table with instant search-as in your example
Ideally, to one of the cells of the table was a link to a page on the site
that is, for example,

Something \ something \ something \ link 1 \ something
something \ something \ something \ ref 2 \ something

but first, I want to understand, I bought what you need?
or do I need to buy ARI datatable?
If I bought what you need, then I need a guide, how to make a table, or rather as it is connected to kompanentuu?
I'll make a table in Excel or as a different way, anyway, I just do not understand, how best and how to connect to a component
I thought it would be box-like text editor in the Joomla-made table-indicated where in the site-display-ready, and as this is not-and I'm at a loss.

"ARI Smart Content" can show data from a database, a CSV file or convert a plain HTML table to a powerful table with search, paginh and other features. Specify where your data is stored so we can provide a sample code.

okay
I decided to do things honestly, it is a rarity in Russia
I bought a membership in the Gavick
and that this template posed for hosting
<http://demo.gavick.com/joomla16/mar2012/>
I do not have tables, I did not do, because they do not understand how your extension
But I will send you an example of what will be in free-format
Only incorrect hyperlink, and so all true

If you want to show data from /data/report.csv file with help of "ARI JDataTable" plugin, place the next code into an article:

```
{arijdatatable}  
  {aricsvtable file="data/report.csv"}  
  {/aricsvtable}  
{/arijdatatable}
```

PS: If you use a WYSIWYG editor, before inserting plugin code switch it to plain text mode.

Regards,
ARI Soft
