ARI Data Tables Component - Feature Request!

Posted by andybon - 2012/06/02 20:38

_____

No forum for ARI Data Table feature requests like those that exist for other ARI products... so hope this will be seen by the right people here..

Could we have an ARI Data Table Component? I'd love to be able to create Categories in the Back-End (eg Running, Swimming, Football) and then be able to upload the CSV files into selected categories....

Then a Component Menu View would allow display of a specific table OR display of a category - which would perhaps give a drop down at the top of the front-end view and let people choose which of the tables in that category they want to see...

I use ARI Data Tables SO MUCH that just having it as a module / plugin is quite challenging when it comes to presenting multiple data tables at the front-end - The Component suggestion would solve it...

What do you think?

Hello,

We have sent the answer by email. Check it please.

Regards,
ARI Soft
