
Just started to get this message...

Posted by pmarks - 2012/06/04 16:32

First message

DataTables warning (table id = 'at_4fccdf7cba492'): Cannot reinitialise DataTable.

To retrieve the DataTables object for this table, please pass either no arguments to the dataTable() function, or set bRetrieve to true. Alternatively, to destroy the old table and create a new one, set bDestroy to true (note that a lot of changes to the configuration can be made through the API which is usually much faster).

Second message

DataTables warning (table id = 'at_4fccdf7cba492'): Cannot reinitialise DataTable.

To retrieve the DataTables object for this table, please pass either no arguments to the dataTable() function, or set bRetrieve to true. Alternatively, to destroy the old table and create a new one, set bDestroy to true (note that a lot of changes to the configuration can be made through the API which is usually much faster).

Is there a problem and do I need to do anything?

Hello,

Where we can see the problem?

Regards,
ARI Soft

We send the answer yesterday. The page doesn't contain "ARI Data Tables" module.

Thanks.

I think the problem was to do with the enabling of of the Joomla Cache, both in Global Settings and the Plugin.

If you use Joomla! cache, try to set "Fix Joomla! cache issue" parameter to "Yes" in "System - ARI Extensions" plugin settings.
