ckforms image path in mysql table

Posted by prasz - 2012/06/18 13:34

_____

Hello,
I have ckforms and aridatatables installed. I list the ckforms data result with aridatatables in frontend.
The ckform is store the file upload in the tmp dir, and the full path in the db. eg.:
/home/moviecas/public_html/tmp/20100214060_4fdf2c642e5a4.jpg
I would like to display the image in the table result with fixed width and height.
How can i do this?

_____

Hello,

You can use "Columns Settings -> Format" parameter. Set name of the column with the images in "Columns Settings -> ID" parameter and populate "Columns Settings -> Format" parameter with the following value:

thx for the quick reply, but isn't working.
The column name in the ckforms table is F21.
so i write F21 for the format parameter id field, and paste the code for the value.
I try it recognize links and without it. the result is same, no image display.
I attached the module properities

_____

Could you provide a link to a page with the module? If it is private, you can send it by email.
