
Transpose columns to rows

Posted by timw - 2012/06/22 18:53

Using ari data tables, is there any way to display columns as rows?

For example, here's the current table info:

Name	Address	Zip Code	Phone Number	Email Address
myname	123 st	64855	312-454-7885	blah@some.net

Can I have ari data tables display it this way?

Name	myname
Address	123 st
Zip Code	64855
Phone Number	312-454-7885
Email Address	blah@some.net

Set "SQL -> Revert data" parameter to "Yes".

Regards,
ARI Soft
