New install and SQL query

Posted by AlexZ - 2012/06/29 10:25

_____

Hi,

1. What is a simple text to write in SQL query text box to see if it's working? I'm not really good at this so I would just like to know if everything works ok.

ANSWER - this works: SELECT title FROM #__content

2. I managed to have HTML table sortable but I have a problem with sorting numbers with "," as decimal symbol, it does not sort them correctly. Is there any detailed help on how to use it, I already read the "short help" file your module links to but it's not helpful. I also wanted to change the sorting type from "String", but it ignores my change and always returns it to String after I save.

3. Also, I use SobiPro to populate a database I need. From this database I would need to fetch only some data that a product has and show it in a table I create with your module. Could you do this query for me, what would be the cost?

Regards,
Aleksander

_____

Hello,

2. What table widget do you use (value of "Choose table type" parameter)? Could you provide a link to a page where we can see a table on your site?

3. We can help this the query, but we need SQL dump of Sobi tables. Send it by email please and specify what data do you want to show.

Regards,
ARI Soft
