
Where are settings saved?

Posted by gorden - 2012/07/06 17:18

Due to the kickass nature of your Datatables module, I have used it on around 500 selection tables on this website: www.powergatellc.com

Now my client wants me to adjust the settings on all 500 tables. I'd like to just update the settings via what is saved in their database via an export / import function, but i can't figure out where the heck you save all the fields for this module.

Please advise. :blink:

Hello,

See "params" and "extra_params" fields in "#__modules" database table (where #_ is a table prefix).

Regards,
ARI Soft

. . . and thanks to your kick ass support, I was able to get it done within 30 minutes of posting my question.

Thanks and keep up the darn good work.

Gorden (Happy Camper) Mack :woohoo:
