## Hyperlink search terms

Posted by timtenn - 2012/07/13 21:10

---

Is it possible to use hyperlinks in the "caption" setting to fill in pre-defined search terms into the search input box? If so, can you advise how?

Meaning have a hyperlink that display a word, and when clicked, that word is inserted into the input box.

Hello,

If you use "ARI Data Table" widget, set "Caption" parameter to the next value:

test

Wow, that's great service. Thank you for the response so quickly. This works to put the text into the field, but the field doesn't respond to the new text in it. It currently requires pressing the "Enter/Return" key on the keyboard before the search is performed. Is there a way to fix this?

This helps to put the cursor in the search field, but it still doesn't apply the search until pressing "enter" on the keyboard.

We have checked the code in FireFox browser and it works fine. Where we can see the problem?
