## Heading and footer area too wide

Posted by timw - 2012/07/14 13:56

---

When I set the table width to any value less than 100%, the header and footer do not resize as well. Is it possible to have those resize with the table? See example here:

---

Set table width to 100% and add the next CSS rule to "CSS Styles" parameter:

```
{ $id }_wrapper.dataTables_wrapper
{
  width: 60%;
}
```
