Initial Setup and config - just getting started

Posted by GrahamBamfield@hotmail.co - 2012/07/20 15:14

_____

Hi,

I've just down loaded the file com_arismartcontent_data (zipped)
and installed into my Joomla modules - install reported success

In Module MAnager I see ARI Smart Content (which is enabled)
and under Components Is see ARI Smart Content - whcih gives me a plugins templates etc

At this point all I need to do to get started is an SQL statement to a any database to retrieve records ... i'm hoping i will be good from there

I am not seeing any thing which lets me say what type of db etc
do I need to create an ARI data article..(I have seen it refered to as a module) How do I get past these initial setup steps

Hope that's clear enough

Thanks
G
