
Can't get "Save State" feature to work

Posted by jasondmcgee - 2012/07/21 16:05

Hello,
I'm using ARI Data tables, and I have a single table loading in a page. I have the module for the table set with the following options:
Save State: YES
Duration of cookie: 7200

Hello,

Download and upgrade "ARI Data Tables" module. After this set "Fixed ID" parameter to "Yes".

Regards,
ARI Soft

Thanks! That worked!
One follow up question: That works great for a single table on a page. On some pages, I have multiple ari-data tables (modules) loaded. This seems to break that functionality for some reason.
Scenario on page:
Table 1
Table 2

Sort Table 1, then refresh- Result: Table 1 stays sorted.
Refresh again- Result: Table 1 goes back to default view.

Sort Table 2, then refresh- Result: Table 2 goes back to default view.

If I remove either table from the page, and only keep one table, it all works perfectly.

Is there a step I'm missing on getting multi table on single page to work?

Thanks again for your help!
Jason

EDIT: This may be some kind of caching issue. I tried it on another machine and some of the multi table pages worked, and some didn't. Still testing it out. Thanks.

If the problem still appears could you provide a link to a page where we can see it?

Regards,
ARI Soft

Update on issue:

My issue appears to only happen on my Macbook under Firefox. On my mac under Safari it works fine and under windows, IE and Firefox is working fine. Could be just my mac configuration.

Thanks again for the support! Awesome product!
Jason
