[SOLVED] Feature Request

Posted by JugglingReferee - 2012/08/01 05:25
_____

I have a query that finds the highest score in each tournament.

Right now, I allow the user to choose between two pagination options: 10 items per page, or 50 items per page.

I would like to give the option to the user to choose "All" which would basically remove pagination, and have all results on the page.

How quickly can this be added?

Hello,

If you mean "ARI Data Table" widget from "ARI Data Tables" module, set "Choose custom paging mode" parameter to "Advanced", set "Custom paging -> Page size" to -1 and "Custom paging -> Label" to All value.

Regards,
ARI Soft

_____

Thank you.

Having "All" works, except that it is automatically first in the drop down list of sorting options. I want it last. It is listed last in the "Custom Paging" list.

Can the header look like TinyTable?

_____

If you want to show "All" option at the end of list, set "Page size" parameter to 99999 value.

"ARI Data Table" widget doesn't support ability to use theme of "TinyTable" widget.
