# Accessing RSJoomla Forms data

Posted by kmendis - 2012/09/08 12:28

_____

I have RSJoomla Forms (RSJF)
Would like to create a front-end form with RSJF.
If I use this and have the data in RSJF can I access and display data as I did accessing SQL data?

Any experience with RSJF would be really helpful

If this is not possible let me know what FORM extension can be used to create a form and collect data where ARI Data Tables can display?

Thank you in advance

_____

We don't have experience with RS Forms extension, but we can try to help if you send SQL dump of RS Forms tables with sample data by email and specify what do you want to see on frontend.

Regards,
ARI Soft

_____

No I do not know where the RSJ form data is located
Certanly I cannot see MySQL tables

What FORM extensions can you recommend to collect data from visitors that ARI-Tables can access can show on the front-end?
Does ARI-Soft have any such extensions?

Thank you

_____

Set "SQL query" parameter to the following value:

SELECT
 SubmissionId,
 FieldName,
 FieldValue
FROM
 #__rsform_submission_values
WHERE
 FormId = 8
ORDER BY SubmissionId DESC, FieldName ASC

Change FormId in "WHERE" clause with ID of your form.

Set "SQL -> Graph transformation -> Enable" to "Yes", "SQL -> Graph transformation -> X axis column" to "FieldName", "SQL -> Graph transformation -> Y axis column" to "SubmissionId", "SQL -> Graph transformation -> Value column" to

"FieldValue":

_____

Thank you very much
Its working well with RSJForms
I have emailed you with a question regarding how to limit the display fields giving the site URL and pages
Your support has been simply fantastic (even for a person with limited knowledge in SQL and Joomla)
Kumara

_____

Hello

The ARI Data Tables are working well (with RSJForms) and the page that I have displayed a list of article publications
given below
http://ausframe.org/index.php/publications/aridatatables-rsj-form-data

My issue is that I do not know how to control the order/sequence in which the fields are displayed.
Currently its displayed  - RCS, PubMedId, Source, Title, (Authors are not even displayed)
How I want it displayed - Title, Authors, Source, PubMedId, RCS

The SQL query is in the correct order (below), but seems ineffective
SELECT
 SubmissionId,
 FieldName,
 FieldValue
FROM
 #__rsform_submission_values
WHERE
 FormId = 6
AND
 FieldName IN ('PubMedId','Title','Author','Source','RCS')
ORDER BY SubmissionId DESC

How do I display the fields in the order I want? -
Thank you
Kumara

_____

Hello,

Could you send SQL dump of #__rsform_submission_values table by email?

Regards,
ARI Soft

_____

Hi -

I am using rsforms and what I am trying to accomplish is to have a dynamic sql statement generated and to have the data presented based on user input as illustrated in attached.

As an example, if end user selected "Italian" in cuisine drop down box, only those restaurants meeting selection criteria would be displayed.

Thr dropdown boxes are all prepopulated via rsforms SQL statement.

Thanking you in advance for your assistance with this issue. http://www.ari-soft.com/images/fbfiles/images/interface.png

_____

Hello,

You can read how to show data from "RS Form" extension here.

Regards,
ARI Soft

_____

Hello and thank you for your reply to my posting.

I'm not quite sure that I have explained what I am trying to accomplish clearly,or Perhaps I am not understanding your response.

What I want to accomplish is to retrieve and display data from a table based on user input to RSforms drop down box not the RSforms values that the user selected.

An example of a Query:

SELECT
  CompanyName,WEB
FROM sheet4
  WHERE
    City = (whatever user selected in RSforms City dropdown box)
  AND
    cuisine = (whatever user selected in RSforms Cuisine dropdown box)
(whatever user selected in RSforms City dropdown box)

Also, if user does not make any selections from RSForms dropdown box(s), then retrieve all records.

I have purchased both Ari SmartContent and DataTables products as I believe your last response was based on Ari DataTables.

Thanking you in advance for any assistance you may provide towards the resolution of this issue.

_____

How to display
"FieldName" as header table and
"FieldValue" as content of FieldName

Table A using the source
-------------
SELECT
FieldName,
FieldValue
FROM
#__rsform_submission_values
WHERE FormId = 1
AND
FieldName IN ('Nama','Email','About','Message')
ORDER BY SubmissionId DESC
--------------

From Table A to Table B

_____

"ARI Smart Content" doesn't support this ability. It is supported by "ARI Data Tables" extension.

Regards,
ARI Soft

_____

"ARI Data Tables" or ARI "Smart Content: DataTable Pack"
because I've already "ARI Smart Content"..

===============================================================================

## Re:Accessing RSJoomla Forms data

Posted by admin - 2013/01/29 13:42

_____

"ARI Smart Content" (also "ARI Smart Content: DataTable Pack") doesn't support feature. It is supported by ARI Data Tables.

Regards,
ARI Soft
