Try now please. It was the problem with "RPL jQuery" plugin. It calls noConflict() method for jQuery incorrectly.

Then it is necessary to update the plugin so it calls noConflict() method correctly.

If you provide a temporary access to your J! backend by email, we can modify it.

We added jquery.no-conflict.js file to /plugins/system/rpljquery/ folder and modified /plugins/system/rpljquery/rpljquery.php file.
