
Table width to long

Posted by Token - 2012/10/21 12:44

Hi,

I have managed to show a nice table with some data.

The only problem is that it is now too long in width. How can I create scrollbars to the right?

Hello,

Use "Choose table type -> ARI Data Table -> Scroll Width" parameter. For example set it to 600

Sorry, can't find it where to change this. Searched in the backend in the component plugin options and in the specific article. Could you please be more specific where to choose the table type etc.

Do you use "ARI Data Tables" or "ARI Smart Content" extension?

This topic is about "ARI Data Tables" extension and we posted solution for "ARI Data Tables".

Mm, posted it in the wrong discussion.

I have Ari Smart Content. Thought it was named Ari Data Table B)

My bad.

Is it still possible in Smart Content to have a solution?

Currently "ARI Smart Content" doesn't support this ability.

O, I bought ARI Smart Content: DataTable Pack because i thought ARI Data Tables was also included. I have no idea what the difference is, but will buy ARI Data Tables then also ;)

These are different extensions. "ARI Data Tables" is a module, "ARI Smart Content" is a component which contains a lot of plugins.
