
Trouble getting multiple tables to show on one pg

Posted by FaytZero - 2012/11/07 10:34

Hi, I have been trying to enable the use of multiple tables on one page, currently I have two module instances one ID 87 and ID 88 both linking to separate CSV files with the desired data.

However no matter what I try it only seems to show the first table and nothing for the second.

Here's a link to the page - <http://australiannerf.com/splash/index.php/ns>

What I is {aridatatables moduleId="87"}{/aridatatables}
and the next line is {aridatatables moduleId="88"}{/aridatatables}

Any help would be greatly appreciated. Thanks

About 5 minutes later I solved my issue. Please ignore this XD. Great module BTW I like it very much.

Hello,

Feel free to contact us if you have any questions about the extension.

Regards,
ARI Soft
