## Links & Filters

Posted by FaytZero - 2012/11/07 12:12

---

Hi again,

What I'm trying to do now is have one entries in the table link to another page, I searched on the forum here but couldn't find anything. I'm using Joomla Data tables with CSV files.

My second questions is also on another page I'm trying to set that particular module to only show records that contain certain values in certain columns, is that a standard feature or is it even possible?

Thanks heaps.

Hello,

Read this post please.

Thanks, but those instructions are for SQL queries, as I said in previous post I'm using CSV database not SQL.

It is possible to use request variables in "CSV -> Filters -> Value" parameter.
